Example 6; Page 70; 82pp; English.

This sequence is encoded by the SCZ gene which was isolated using the method of the invention. The SCZ gene has been previously identified as CD84, GenBank Accession No: NM 003874. CD84 is a 73 kDa antigen present on platelets, monocytes and circulating B cells. This protein may be involved in the processes by which the brain responds to biological stimuli. Therefore they may provide targets for therapeutic intervention in the treatment of schizophrenia. The SCZ sequence may be used in a new method of diagnosing susceptibility to schizophrenia in a patient. The method comprises determining the presence or absence of an allele of a linked polymorphic marker in the DNA of the patient. The polymorphic marker is present in chromosome 1q22 and is linked to a gene (SCZ) having

The invention relates to nucleic acid molecule, designated CD2000 which encodes a polypeptide containing immunoglobulin (Ig) and Ig-like domains and SIAMA associated protein (SAP) motifies. CD2000 DNA and protein is cuseful for treating disorder such as immune proliferative disorders, useful for treating disorder such as immune proliferative disorders (e.g. carcinomal, viral infection, autoimmune disorders (e.g. archivitis, multiple sclerosis, Grave's disease, and Hashimoto's (e.g., arthritis, multiple sclerosis, Grave's disease, and Hashimoto's clissase). T cell disorder (e.g. acquired immune deficiency syndrome (C. MIDS)), inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), inflammatory disorders (e.g. rheumatory disorders, septic shock, costeoarthritis), allergic inflammatory disorders (e.g. asthma and psoptotic disorders (e.g. systemic lupus erythematosus, and insulin-dependent diabetes mellitus), cyctoxic disorders, septic shock, chronic obstructive pulmonary disease (e.g. emphysema), bronchitis, cirrhosis, cachexia, jaundice, hepatic circulacory disorders, hepaticis, cirrhosis, cachexia, jaundice, hepatic circulacory disorders, hepaticis, cirrhosis, cachexia, jaundice, hepatic circulacory disorders, cachexia, jaundice, hepatic circulacory disorders, pepaticis, cirrhosis, cachexia, jaundice, hepatic circulacory disorders, pepaticis, circhosis, cachexia, jaundice, hepatic suseful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive crials and phramacogenomics), and in methods of treatment (e.g. therapeutic and prophylactic). The present sequence is human CD84 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
Novel isolated polypeptide containing immunoglobulin and immunoglobulin-
like domains and SLAM associated protein, termed CD2000 or CD2001, useful
for treating immune, inflammatory, or hepatic circulatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

The invention relates to treating a subject having a condition that benefits from modulating the balance of regulatory T cell function.

CC benefits from modulating the balance of regulatory T cell function to relative to effector T cell function, or vice versa, in a subject. The method involves administering an agent that modulates the expression or activity of a molecule selected from PTGER2 and TGFbetal, or Jagged-1, CG PR-32, CD84, CD89, SECTONIA, RZC, GRR63, PG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-9, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-9, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-9, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-9, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-9, PSG-9, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-9, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-9, PSG-9, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-9, PSG-9, PSG-9, PDE-4d, and PSG-9, PSG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 AYVTPGDSETAPVVTVTHRNYYERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to PRO proteins and their coding sequences. The PRO proteins are useful for diagnosing and treating a B cell related disorder, eg. X-linked infantile hypogammaglobulinemia, polysaccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency selective IgA deficiency immunodeficiency with hyper IgM, transient hypogammaglobulinemia of infancy, Burkitt's Iyamphoma, intermediate lymphoma, follicular lymphoma, type II hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or anytiosing spondylitis. The PRO proteins are also useful for preparing a medicament for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and come mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the of protein expression in the first soft tissue sample indicates the cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic saric sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antithemutalc, immunosuppressive, osteopathic, antidabetic, dermatological, antipsoriatic, antiallergic, antiatematic, hepatocropic, and respiratory activity. A polynucleotide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,

The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin protein as compared to the human protein only. The invention relates to brotein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59311-9 preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the presence of mutations in the new polynociacistic uses are described for each of the 186 polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, by bacteria, viruses and fungi and ocular disorders infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound cauburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The collure of primary tissues, to regenerate tissues and in chemotaxis. C.c. increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents one of the novel human created proteins of the invention. Note: This sequence did not form of the printed specification, but was obtained in electronic format correctly from USPTO at seqdata.usptc.gov/sequence.html?
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SSVFLFRLFKRRQDAASKKTIYTVIMASRNTQPAESRIYDEILQSKVLPSKEEPVNTVYS 300

                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the isolation of nove number of also discloses vectors, host cells, antibodies, and recombinant methods also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins are useful for preventing, treating, ameliorating or disgnosing medical conditions such as hyperproliferative disorders (e.g. leukaemia or breast cancers), wounds, reproductive disorders, blood-related disorders (e.g. Maskott-Aldrich syndrome or thrombocytopaenia), immunodeficiencies (e.g. Maskott-Aldrich syndrome or thrombocytopaenia), autoimmune disorders (e.g. Wiskott-Aldrich syndrome or thrombocytopaenia), autoimmune disorders (e.g. Wiskott-Aldrich syndrome or thrombocytopaenia), autoimmune disorders (e.g. Maskott-Aldrich syndrome or thrombocytopaenia), autoimmune disorders (e.g. Maskott-Aldrich syndrome or thrombocytopaenia), autoimmune disorders (e.g. Maskott-Aldrich syndrome or circle or bacterial or fungal infections (e.g. Alza or sepsis), remail or disorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, cerebral ischaemia or congenital heart defects), respiratory clisorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, disease), and inflammations (e.g. Crohn's disease). The parkinson's disease), and inflammations (e.g. Crohn's disease). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form at directly from the cuspor web site at seqdata.uspto.gov/psipsDIDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynucleotide fragment of a sequence not given in the specification, or its allelic variant; a polynucleotide fragment of the CDNA sequence; a polynucleotide sequence encoding a polypucleotide, or its fragment, domain, epitope or species homologue; or a polynucleotide that hybridises under stringent conditions to any one of the sequences of (a) -(c). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or ameliorating a medicament for diagnosing, preventing, treating or ameliorating a medical condition e.g., cancer. The is the amino acid sequence of a novel human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                JM, Ferrie AM;

                                                                                                                                                                                                                                                       22-AUG-1997
                                                                                                                                                                                                                                                                                                                                                     05-SEP-1997
                                                                                                                                                                                                                                                                                                                                                                              12-SEP-1997
```

The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPs) they encode. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoistic disorders, endocrine disorders, diseases of the immune system, inflammatory disorders and many others. Full details of disorders that may be

Isolated nucleic acid molecules encoding human secreted proteins, useful for preventing, diagnosing and treating disorders associated with aberrant expression and activity.

Claim 11; SEQ ID NO 483; 142pp; English.

```
prevented, diagnosed and/or treated by the above methods are given in the proteins. The nucleic acid molecules may be used to produce their proteins. The nucleic acid and it's complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The SPs may also be used as antigens in the production of antibodies against the proteins and assays to identify modulators of SP expression and activity. The anti-SP antibodies may also be used to down regulate expression and activity. The neti-SP antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The present sequence represents the amino acid sequence of a human secreted protein.

Human 5' EST secreted protein SEQ ID NO: 189 from WO 9906553. AAY12524 standard; protein; 79 AA (first entry) 22-JUN-1999 AAY12524;

Human, secreted protein, EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; antiinflammatory; tumour inhibition; antitumour.

```
human secreted proteins, and encode the proteins given in AAY1250 to human secreted proteins, and encode the proteins given in AAY1251 to AAY12669, respectively. The proteins given represent the signal peptide and an N-terminal fragmen of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for disquesis and therapy. The proteins obtained may have cytokine activity, call proteins obtained may have cytokine activity, call proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/ chemokinetic activity, haemostatic and thrombolytic activity, receptor/ ligand activity, antiinflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acides encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell
                                                                                                                                         New nucleic acids encoding human secreted proteins - obtained from cDNA libraries derived from umbilical cord, lymph ganglia, lymphocytes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MAQHHLWILLLCLQTWPEAAGKDSEIFTVNGILGESVTFPVNIQEPRQVKIIAWTSKTSV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated immune response associated protein (IRAP) comprising any of 35 fully defined sequences given in the specification. The polypeptide of the invention demonstrates antiarteriosclerotic, cytostatic, neuroprotective, antiparkinsonian, hepatotropic, cerebroprotective, antiinflammatory, nootropic and vasotropic activities and may be useful for treating a disease or condition associated with decreased expression or overexpression of functional immune response associated proteins, while the antibody is useful for diagnosing a condition or disease associated with the aspression of IRAP, such as arteriosclerosis, cirrhosis, cancer, stroke, Alzheimer's disease, Parkinson's disease and Crohn's disease. Furthermore, the molecules of the invention may be utilised during gene therapy incredures. The current sequence is that of a human IRAP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated immune response associated proteins (IRAP) polypeptide and polynucleotide, useful for diagnosing and/or treating disorders with aberrant expression of IRAP, such as arteriosclerosis, cirrhosis, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        OHHLWILLLCLQTWPEAAGKDSEIFTVNGILGESVTFPVNIQEPRQVKIIAWTS-KTSVA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to new immunoglobulin superfamily proteins (IGSFP). The polypeptides, polynucleotides, agonists and antagonists are useful for diagnosing treating or preventing disorders associated with aberrant expression of IGSFP, particularly cell proliferative, e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, parcxysmal cocturnal haemoglobiuntia, polycythaemia vera, psoriasis, primary thrombocytopenia or cancers including leukaemia, lymphoma, sarcoma or myeloma, and autoimmune or inflammatory disorders, e.g. acquired myproiditis, contact dermatitis, languages, asthma, asthma, autoimmune thyroiditis, contact dermatitis, coln's disease, diabetes mellitus, chroiditis, contact dermatitis, coln's disease, diabetes mellitus, contact dermatitis, syndrome, syndrome, multiple sclarosis, osteoarthritis, osteoporosis, pancreatitis, Reiter's syndrome, rheumatoid arbitists, Sjogren's syndrome, uveitis, trauma, or viral, bacterial, fungal, parasitic, protozoal or helminthic infections They are also useful in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of IGSPP protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        62 YVTPGDSETAPVVTVTHRNYYERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTTT 121

The present invention relates to a new method for screening for susceptibility to a systemic autoimmune disorder. The method comprises screening for at least one mutation within the systemic lupus crythemacosus (SLE)-1B loci. Screening for susceptibility to autoimmune disorders such as systemic lupus erythematosus involves screening for at least one mutation in a gene or genes with the SLE-1B loci such as a gene cancidar signalling lymphocyte activation molecule (SLAM), lymphocyte activation molecule (SLAM), lymphocyte antigen (Ly)-9, 284 (a natural killer cell receptor), CD48, CD64, LX108, CS1, DEDD, NITI, upstream transcription factor (USF), GOLGA4. The method cof the invention is useful for treating SLE and involves administering a construct comprising a wild-type sequence encoding any one of the above mentioned genes. Gene therapy also involves the use of antisense constructs or ribozymes directed against the above mentioned genes for treating SLE. Note: The present protein sequence represents a human creating SLE. Note: The present protein sequence represents a human content of the mediate a break in immune tolerance. This sequence is shown the sequence listing but is not further defined in the specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence '2, Application US/08348792

Patent No. 5576423

GENERAL INFORMATION:
APPLICANT: Aversa, Gregorio
APPLICANT: Cocks, Benjamin G.
APPLICANT: Cocks, Benjamin G.
TITLE OF INVENTION: FURIFIED GENES ENCODING MANMALIAN CELL
TITLE OF INVENTION: SURFACE ANTIGENS; PROTEINS AND ANTIBODIES
CORRESPONDENCES: 12
CORRESPONDENCES: 12
CORRESPONDENCE ADDRESSES.

Publication No. US20030054002A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: WANDSTRADT, AMY
APPLICANT: WANDSTRADT, AMY
TITLE OF INVENTION: ISOLATION OF GENES WITHIN SLE-1B THAT MEDIATE A BREAK
TITLE OF INVENTION: IN IMMUNE TOLERANCE
TITLE OF INVENTION: IN IMMUNE TOLERANCE
TITLE OF INVENTION: IN UNMER: US/09/860,836B
CURRENT APPLICATION NUMBER: US/09/860,836B
CURRENT FILING DATE: 2002-08-13
PRIOR APPLICATION NUMBER: 60/204,963
PRIOR PILING DATE: 2000-09-21
NUMBER OF SEQ ID NOS: 37

SOFTWARE PATENTING VOS: 37

A, Molecule type: protein
A, Residues: 35-59 <WIL>
C, Comment: This protein is expressed at the cell surface and plays a determinant
C, Genetics:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             93 NLVISDLRMEDAGDYKADINTQADPYTTTKRYNLQIYRRLGKPKITQSLMASVNSTCNVT 152
